Swing Prism Borescope Kit

- 6mm to 14mm diameter
- 115mm to 1505mm working length
- Adjustable direction of view from -7° to 133° (including field of view)
- Total swivel range of 140°
- Forward and retrospective viewing
- Focusable
- 370° orbital rotation
- Single handed operation
- Ergonomic detachable handle
- Cold light illumination
- TV adaptor
- All in one portable case

Atlas Swing Prism Borescope Kit performs the work of three ordinary borescopes. Controls on the scope handle permit adjustment of the Direction of View (0-133 degrees) via the prism on the front of the scope providing a range of imaging from one device that historically required three individual borescopes.

Swing Prism Borescopes enter openings as small as 6mm, provide direct, lateral and retrospective views with 370 degree rotational control.

The sweep of the viewing arc ensures complete and accurate inspections. Users of the Atlas Swing Prism Borescope Kit lower inspection costs by completing inspections quickly and reduce operating costs by avoiding unscheduled shutdowns and identifying problems prior to failure.

Camera not included.

AUTO water pumps, radiators, manifolds, brakes, serial number identification

HVAC inspect for mold in ducts and evaporation coils | **LAW ENFORCEMENT** inspect for contraband

AVIATION turbine engine and airframe inspections | **PLUMBING** inspect for leaks and blockages, natural gas compression

EXTERMINATION pest control inspection | **WELDING** vessels, tanks, castings | **PHARMACEUTICALS** high purity piping
